The Inquiry

GRADE 9 UNIT 1: THE PARTICULAR NATURE OF MATTER

MR. TONY QUAN

QCIE
SCIENCE

Atoms tend to be more stable if they have 8 valence electrons. Atoms tend to form bonds or share bonds. When atoms bond, valence electrons may be transferred from one atom to another. Or maybe shared between the atoms. A chemical bond is the force of attraction that holds atoms together as a result of the rearrangement of electrons between them.

YOUR
TEACHER

My name is Tony Quan and I am the QCIE Math and Science teacher.

Upper School Room 501

In this inquiry, we will be asking and exploring the following essential questions:

-How and why do chemicals and compound interact with each other? What is the law of conservation of mass?
